DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-42 and 49-50, drawn to a method of writing a waveguide along a waveguide propagation axis in a substrate, classified in class 65, subclass 385.
- II. Claims 43-48, drawn to an optical waveguide device disposed in a substrate, classified in class 385, subclass 129.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by using other types of lasers.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Should Applicant select Invention I, the claims directed to the following patentably distinct species of the claimed invention:

Species A, claims 1-16, directed towards a method of writing a waveguide wherein the widened affected region has a cross-sectional profile capable of supporting a fundamental mode of a signal having a telecommunication infrared (TIR) wavelength and a cross-sectional profile incapable of supporting the fundamental mode of the signal having the TIR wavelength.

Species B, claims 17-29, directed towards a method of writing a waveguide wherein the scanning is performed during the modifying step.

Species C, claims 30-42, directed towards a method of writing a waveguide wherein the ultrashort laser pulse beam has a polarization in a direction parallel to the waveguide propagation axis.

Species D, claims 49-50, directed towards a method of writing a waveguide wherein the ultrashort laser beam is depolarized.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
